

3D Visualization

If a picture says a thousand words ...

- Then what does 25 pictures per second say?

About MindIT:

MindIT is an e-learning company that assists businesses and organisations in connection with skills development through effective use of technology. Our technology and our working methods have been developed for over 10 years. We offer:

Content Production

We have extensive experience with production of e-learning courses and can tailor learning initiatives to your business, and various user groups' skill needs. All our courses are developed according to the SCORM standard.

Consulting

We help our clients' to define, plan and carry out activities in connection with implementation of e-learning.

System Solutions

MindIT has developed MELSTM that enables distribution of learning content to a defined target group. We manage the learning portal so that it removes the need for IT-installations at the client site.

Among our clients are Seadrill, Archer, KCA Deutag, Statoil and Aker Solutions.

3D allows you to visualize ideas and visions. In addition, 3D visualization is a particularly effective way to engage users!

Applications for 3D visualization:

- Visualize concepts
- Communicate technical information
- Detailed equipment presentation
- Enrich marketing and e-learning courses

We have extensive experience of combining 3D visualization and training initiatives. Our proven methods ensure the quality in production.

Advantages of 3D Visualization:

- Visualizes advantages and features of products
- Create enthusiasm around new concepts
- Ideal to emphasize important details
- Cost Effective

Our employees possess expertise within IT, design and communication. It enables us to assist clients early in the process.

In MindIT we emphasize correct visualization level by thinking smart and adapting the level of ambition to the clients' needs. Be inspired!
